-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 1714

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combination of US Pat. No. 5672653 Frisch et al. and US Pub. No. 2002/0188070 Tsuboniwa et al..

It would have been obvious to one of ordinary skill in the art at the time of the instant invention to use polycarbonate polyol as the additional polyol of Frisch because they are known to be more water and hydrolysis resistant than polyesters, as taught by Tsuboniwa, section [0044], are encompassed by the broad language "less hydrophobic polyol such as" of column 1, lines 50-55 of Frisch, many polycarbonates are also polyesters, and they would have been expected to contribute their known properties to the final polyurethane. Unreacted polycarbonate polyol is expected to remain by definition of degree of polymerization, particularly where the lower temperatures and reaction times of Frisch are used. Even this residual amount reads on the instant claims which recite no amounts of the polycarbonate polyol. See the entirety of Frisch. Frisch is silent regarding the Staudinger index of their polyurethanes. The burden is on the applicant to show that it is not within the broad range of the instant claims and that the claimed Staudinger index gives an unexpected result over the Staudinger index possessed by Frisch.
